Homework for Wednesday (9/14)

Sketch

Create a "data-diary" sketch using your HTML knowledge. Take some aspect of your self or your habits and translate it into HTML. It could involve:

- A visual representation of your searching/browsing history
- A sequence of YouTube videos following your chain of thought
- A tapestry of meaningful street view locations
- Logs of conversations/tweets/texts/IMs/etc.
- Snapshots of your daily IRL/desktop/browser habits

Technical Constraints

The site should be composed of (at minimum) two pages:

1. A page (or pages) with your data-diary
2. An "about" page that has: your name, sketch title, a couple sentences explaining your process.

There needs to be a navigation menu on your pages that allows visitors to navigate between your various pages.

Turning in the Assignment

Option 1: Zip the folder and DM it to me in Slack
Option 2 (Bonus): Upload to GitHub Pages and DM me a link in Slack
